EXAMINER

SIEFKE, SAMUEL P

ART UNIT	PAPER NUMBER
----------	--------------

1743

DATE MAILED: 03/07/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/082,415	Applicant(s) PUGIA ET AL.	
	Examiner Samuel P. Siefke	Art Unit 1743	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 December 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,5-13,16-18 and 38-50 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1, 5-13,16-18 and 38-50 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Status

The amendment filed 12/21/05 has been entered. Claims 1, 5-13, 16-18 and 38-50 are currently pending in the instant application.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was

not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims **1, 5-13, 16-18 and 38-50** are rejected under 35 U.S.C. 103(a) as being unpatentable over McNeely et al. (USPN 6,296,020) in view of Kellogg et al. (USPN 6,063,589).

McNeely teaches a fluid circuit that is based upon passive fluid dynamics. McNeely device comprises a plurality of sample well (fig. 3a-3d) a hydrophilic capillary passageway that is in fluid communication with sample well (col. 5, lines 39-41), the passageway including a segment defining a volume of a liquid sample, the segment disposed between two vents to the atmosphere (col. 4, lines 8-10; col. 4, lines 50-55; fig. E-G; col. 9, lines 19-60; col. 11, lines 1-16), a hydrophilic capillary stop disposed within the hydrophilic capillary passageway for preventing sample transport until the resistance of the stop is overcome by a force other than centrifugal force (col. 5, lines 50-59; col. 6, lines 11-47; col. 8, lines 64-68; col. 9, lines 3-14).

McNeely does not specifically teach a device in which liquid flows by capillary action from a sample well into a segment that defines sample volume.

McNeely teaches microchannels is defined herein to be a channel having a diameter of from 0.1 to 1000 microns" then goes on to demonstrate capillary action (col. 5, lines 30-49). Because McNeely defines a specified microchannel diameter being between 0.1 to 1000 microns, these size channel diameters inherently have capillary action when a liquid is present. Thus, the reason McNeely provides capillary stops, so

Art Unit: 1743

liquid does not travel throughout the microchannel unimpeded. Capillary stops are provided to move fluids through microchannels in a controlled fashion and are discussed throughout McNeely. As seen in figures 8a-8c, sample fluid flows into wells or channels and is stopped at a known location due to the use of stopping means (FIG. 8A, stopping means exist at the right of each of the 4 initial wells between each well and the exiting microchannel). Air or another gas is pushed through the ports (appearing as holes to the left of the 4 initial wells in FIGS. 8A-C) into the fluid channels. The air will displace the fluid downstream past the stopping means (FIG. 8B), and in this case, into the consolidation well (FIG. 8C). Air escape ducts in the consolidation well allow displaced air to exit the system so fluid can fill the consolidation well.

Kellogg teaches a sample chamber in fluid communication with a plurality of metering capillaries and an overflow channel. A sample is applied to sample chamber well where it flows into the metering capillaries (by centripetal force). The excess flows in the overflow channel and is discarded. At the end of the metering capillaries is a capillary stop (centripetal forces are used to overcome the stop). It would have been obvious to one having an ordinary skill in the art at the time of the invention to modify McNeely to employ the metering capillaries of Kellogg in order to meter a certain volume of sample for analysis into the metering capillaries. This would provide a precise volume of sample for analysis which is commonly routine and known in the art. It would be recognized that capillary action would move the fluids of McNeely into the metering chambers (provided by Kellogg) because McNeely does not employ a centrifuge for movement of fluids. A hydrophilic stop would be employed at the end of

the metering capillaries to stop the fluid entering the capillary of which would be overcome by the addition of air into the ports as seen in figure 8b.

Further Kellogg teaches reagent wells that contain a reagent adapted to react with a component contained in the sample and produce a response indicating the amount of component in the liquid sample (col. 14, lines 5-34) along with reducing the interference of the component with a second component to be detected (col. 17, lines 5-20). The first reagent well contains a reagent to pretreat the liquid sample (col. 17, lines 5-20). Electrodes are disposed in the reagent wells for measuring properties of the liquid sample (col. 53, line 66- col. 54 line 29). It would have been obvious to one skilled in the art to modify McNeely to employ an electrode to measure a property of a fluid because it is well known in the art that microfluidic devices are used for mixing samples with reagents and detecting a reaction product.

Response to Arguments

Applicant's arguments with respect to claims 1, 5-13, 16-18 and 38-50 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Samuel P. Siefke whose telephone number is 571-272-1262. The examiner can normally be reached on M-F 7:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill A. Warden can be reached on 571-272-1700. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
